

Regulator Attestation - Registry

v1.0.3

Registry v1.0.9

Product: Legacy Lens

Registry Version: v1.0.9

Hash: {{sha256}}

Signature: {{fingerprint}}

STATEMENT OF SCOPE

Legacy Lens is an independent deterministic authority used to support or refuse regulated decisions involving legacy systems. It produces replayable forensic evidence and issues decisions only when guarantees can be proven under a declared governance context.

Legacy Lens does not execute code, infer runtime behavior, or certify compliance.

DETERMINISM

Identical inputs, registry version, and context produce identical evidence bundles, findings, and governance outcomes. Determinism is enforced and verified during release.

BOUNDARY HANDLING

When source-level guarantees cannot be proven, Legacy Lens records boundary evidence and refuses to assert equivalence. Boundary evidence has deterministic governance effect under regulated production contexts.

TIER-2 BOUNDARY GOVERNANCE

Under Production / Regulated / High context:

- Tier-2 Boundary Evidence blocks migration approval
- No discretionary overrides exist
- Scope isolation is explicitly recorded when used

REGISTRY INTEGRITY

- The rule registry is versioned, hashed, and signed offline
- Registry changes are
